

Resilience and Independence in Aging Seminar Series

THE UNIVERSITY OF ARIZONA

College of Medicine

Tucson

BIO5
Institute

College of Medicine –Tucson, College of Public Health, & The BIO5 Institute Present:

“Recovery from Hip Fracture: What We Have Learned Over the Past 30+ Years and Directions for Future Research and Practice”

Jay Magaziner

Professor (Joint Appointment), Epidemiology and Biostatistics

Professor and Chair, Department of Epidemiology and Public Health, University of Maryland School of Medicine

Tuesday, September 18th, 2018

12:00 PM - 1:00 PM

(lunch will be provided)

College of Medicine – Room 8403

Seminar Information:

The Resilience and Independence in Aging Seminar Series is designed to facilitate aging research and to foster new generations of investigators at the University of Arizona to address significant aging research questions. The seminar will bring UA researchers together to create synergies by sharing research findings and research plans. The series will also provide opportunities for UA researchers to meet and to hear from lead investigators of aging and resilience in other research institutions, specifically Pepper Centers.

The goal of the Claude D. Pepper Older Americans Independence Centers (OAIC) program is to increase scientific knowledge that allows older adults to maintain or restore their independence. The NIA supports the OAICs to develop and enhance research and education at institutions with strong programs in aging research. This support is critical to address key research problems, technological limitations, and faculty development needs for future generations of appropriately-trained researchers. The OAICs are also known as "Pepper Centers" - so named to honor the late [Senator Claude D. Pepper](#) who championed the effort to create these centers of excellence.
